

**THE QUICK STAGE SYSTEM**

The Quick Stage system is a tube structure which is one of the most simplest and productive methods of providing access to working at height.

The importance of Working At Height Regulations has increased and this system provides a fall protection platform for sites where work is to be performed over 2 meters in height.

Quick Stage scaffolding is used for:

- Repairs to Buildings
- Maintenance or Repairs to Any Large Structures
- Propping of Slabs and Formwork
